## DEPARTMENT TREMENS' REPERTORY FUNCTION

Dr. Ruprekha Govind Sankade

---

### Abstract-

The rubric is a symptom in reportorial language, and the repertory is an index of symptoms from the proving. The most severe and alarming of all the alcohol-related illnesses is delirium tremens. In addition to alleviating symptoms, homoeopathy seeks to diagnose and treat the underlying causes and individual vulnerabilities of delirium tremens.

---

### INTRODUCTION

People have been making alcoholic beverages by brewing and fermenting grains since the dawn of civilization.<sup>4</sup> Heavy drinkers put themselves at risk of experiencing delirium tremens and other severe withdrawal symptoms if they abruptly cut down or stop drinking altogether.<sup>5</sup> The alcohol spectrum is most severely affected by delirium tremens. Withdrawal symptoms, hallucinations, disorientation, seizures, and maybe death,

might occur if not treated properly. One of the most well-known holistic medical systems is homoeopathy. Using a holistic approach, the notion of individualization and symptom similarities are used to pick the cure.<sup>6</sup> It helps alleviate right away, but it also gets at the root of the problem—whether that's genetic, environmental, emotional, or psychological—and helps the patient become well again step by step.

## CONCLUSION

When it comes to alternative medicine, homoeopathy is among the most popular choices. A holistic approach is used to choose the solution, taking into account both the notion of individualization and the similarity of symptoms. Homoeopathy seeks to treat delirium tremens by getting to

the root of the problem and an individual's predisposition to it. This is the one method that can restore the patient's full health by eliminating all of their symptoms. A variety of homoeopathic remedies for delirium tremens are accessible in materia medica literature; selecting one depends on the symptoms, signs, and etiology of the condition, as well as the appropriate repertory.
